

Climate Risks and Adaptation

Kirsten Halsnæs

with Per Kaspersen and Martin Drews as joint authors

A collage of mathematical symbols and formulas in various colors (purple, orange, red, pink) overlaid on a faint background of mathematical expressions. The symbols include:

- Δ (pink)
- \int_a^b (orange)
- ε (purple)
- Θ (purple)
- $\sqrt{17}$ (purple)
- $+$ (orange)
- Ω (pink)
- \int (purple)
- δ (red)
- $e^{i\pi}$ (red)
- $=$ (red)
- $\{2.7182818284\}$ (purple)
- ∞ (pink)
- χ^2 (purple)
- \sum (red)
- $!$ (red)
- $>$ (orange)
- $,$ (purple)

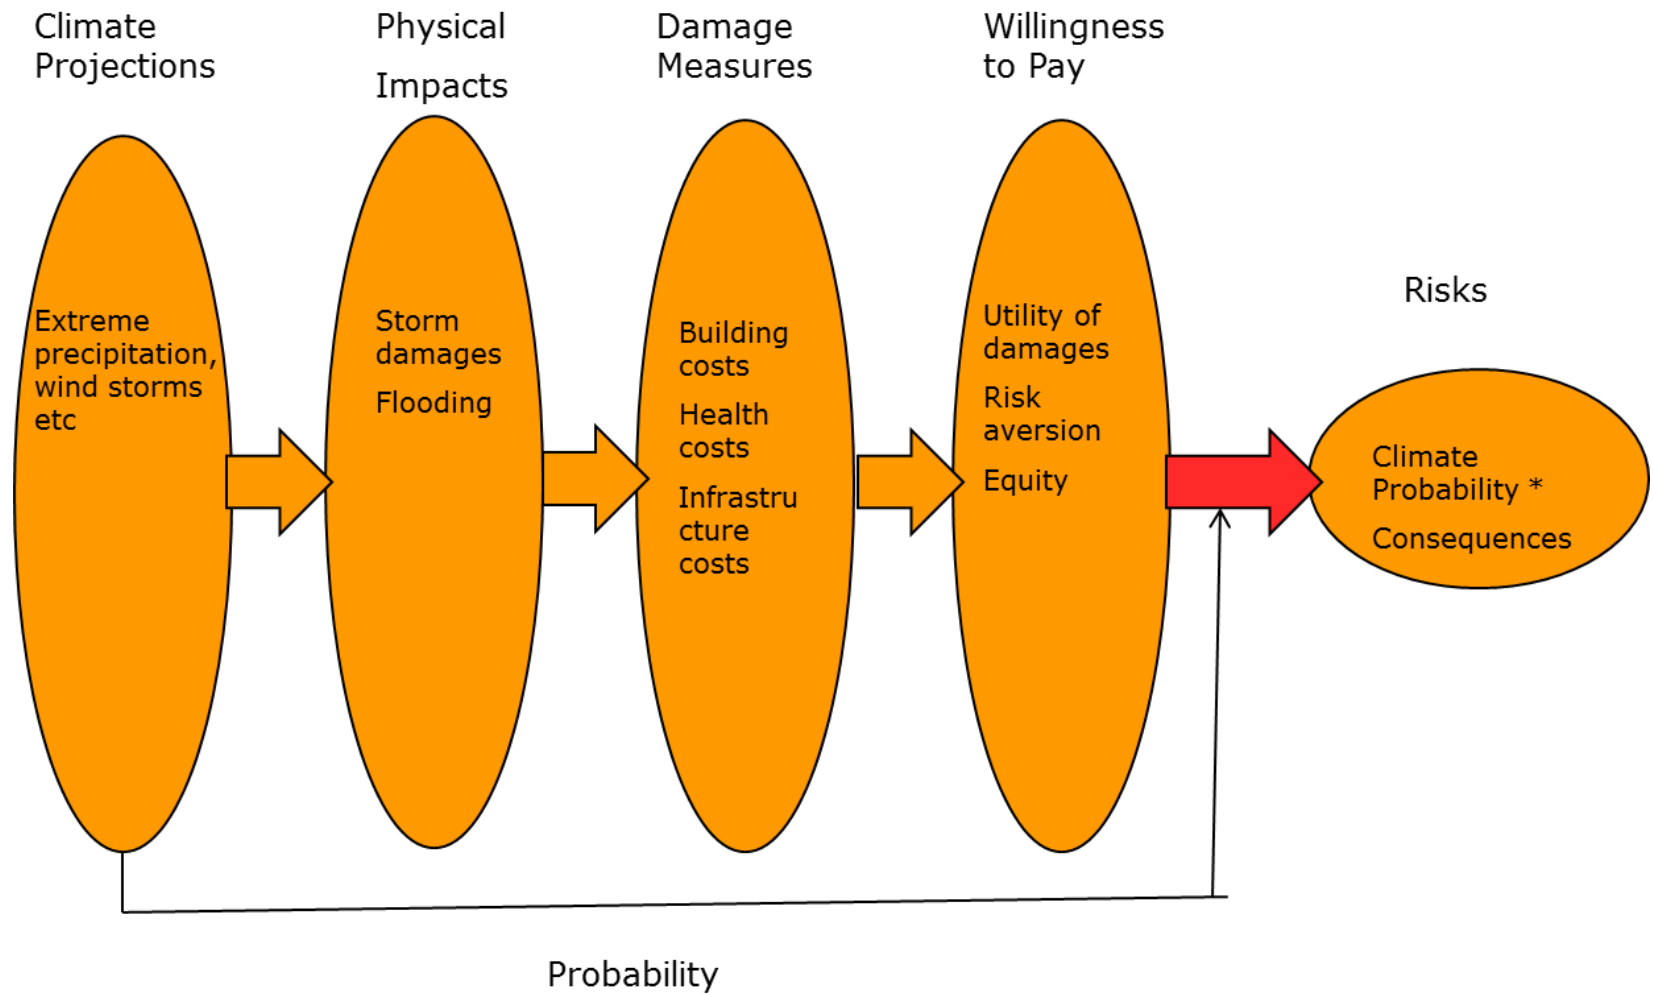

Background formulas include:

- $f(x+\Delta x) = \sum_{i=0}^{\infty} \frac{(\Delta x)^i}{i!} f^{(i)}(x)$
- $\int_a^b \varepsilon \Theta$
- $\sqrt{17}$
- $\Omega \int \delta e^{i\pi}$
- $= \{2.7182818284\}$
- ∞
- χ^2
- \sum
- $!$
- $>$
- $,$

Approach

- Risks are considered for alternative climate change scenarios including 2 degrees, 4 degrees, and 6 degrees with a focus on events with extreme consequences
- Risks are defined as probability of climate events * consequences
- Alternative economic assumptions are applied:
 - Damage cost function
 - Risk aversion factor
 - Discount rate
- Flooding case study from extreme precipitation in the Danish city Odense
- Sensitivity analysis for climate scenarios and economic assumptions
- Conclusions in relation to decision making and on the demand for climate data

Risks: Probability * Consequence

6 Degree

Decision Making Perspective

Black Lines Illustrate Alternative Adaptation Cost Curves

Conclusions

- Climate scenarios for high consequence events are important to adaptation decision making – detailed regional medium term data is needed
- Economic assumptions in particular related to risk aversion and discount rates are important in determining the climate change risk level – large variations are seen and risks vary with a factor of 6 for a 30 mm per hour event for a given climate scenario such as the 6 degree scenario
- Detailed adaptation cost studies will be useful as an input to, where high consequence climate scenarios should focus
