## European Climate Research Alliance

### Uniting Europe's scientific expertise to address climate challenges

Author: Sissi Knispel de Acosta and ECRA expert team; Contact via [secretariat@ecra-climate.eu](mailto:secretariat@ecra-climate.eu); ECRA Rue du Trône 98 1050 Brussels

The European Climate Research Alliance (ECRA) unites top climate research institutes and universities across Europe to improve our understanding of the complex climate system and provide policymakers with the necessary information to develop effective policies to mitigate and adapt to climate change.

Our website offers a wealth of information on climate science, including topics such as climate modeling, observations, and impacts on sectors such as Polar climate impacts and insights, Hydrological Cycle, High Impact Events, and Sea Level Rise. We aim to promote interdisciplinary collaboration and link European research organizations with the European Union's framework for science funding, decision-making, and networking.

Founded in 2011 by

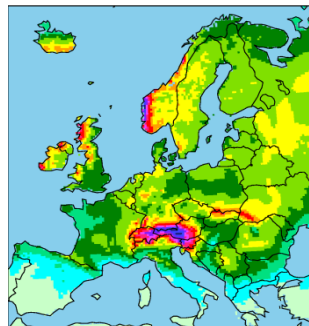

Observer at

ECRA's vision is to support and promote high-quality climate research and ensure that its results inform effective policy development to mitigate and adapt to climate change.

To achieve this, we publish White Papers that provide a comprehensive overview of the current state of climate science, the potential impact of climate change on various regions and sectors, and propose research priorities to advance our understanding of climate change and inform policy decisions. Our White Papers serve as a valuable resource for researchers, policymakers, and stakeholders interested in advancing our understanding of climate change and developing effective strategies to mitigate its impacts.
